

CA CERTIFIES MATCHPOINT AS INTEROPERABLE WITH ALLFUSION PLEX

Provides Complete Change Management Process for AllFusion Plex Generated Applications

Zug, Switzerland / Austin, USA – October 24, 2006 – Heinrich Informatik AG announced today that its **MATCHPOINT** Change Management Solution has been ca smart certified for interoperability with CA's AllFusion Plex, providing an integrated change management solution tailored to the AllFusion Plex application development model.

AllFusion Plex, a multi-platform, model-based, architected rapid application development tool, uses advanced pattern technology to automate development for Windows, J2EE and IBM i5/OS environments. It insulates developers from the underlying architectural complexities of programming standards and specifications — accelerating time-to-market while ensuring the efficiency and quality of the application development.

"**MATCHPOINT** provides AllFusion Plex users with useful change management capabilities that can help them accelerate development and safeguard software quality," said Aline Gerew, vice president of development at CA. "These capabilities are particularly important in today's highly dynamic business environment, where code must constantly be modified to support changing operational requirements."

The **MATCHPOINT** Change Management Solution ensures an efficient and secure management of all software changes. The software supports the whole development and deployment process, from the creation of a change request to the automated deployment into the production environment.

"We are very excited about the partnership with CA," said Christoph Heinrich, CEO. "The tight integration of **MATCHPOINT** with AllFusion Plex will provide a great solution for development shops that are looking for an efficient and secure software management process. **MATCHPOINT** will deliver the same efficiency to the deployment process that AllFusion Plex provides for the development process."

CA partner ADC Austin has been selected as the North American distributor of **MATCHPOINT** by Heinrich Informatik AG. "We are also very excited about ca smart certification for **MATCHPOINT**," said John Rhodes, principal. "We have introduced **MATCHPOINT** to some of our key CA customers, including the Texas Engineering Extension Service. **MATCHPOINT** is proving to be a high-value product to many AllFusion 2E and AllFusion Plex organizations."

The ca smart seal of excellence is awarded to products that integrate seamlessly with CA solutions. The ca smart program enables customers to take advantage of best-in-class enterprise technology while minimizing cost, time-to-benefit and risk.

About Heinrich Informatik AG

Heinrich Informatik AG (www.heinrich-informatik.ch) is the leading provider of software change management solutions for IBM System i in Switzerland. The company is specialized in building high quality multiplatform applications with AllFusion Plex. With their deep knowledge in project management and software management, the company has built the software change management solution **MATCHPOINT** to help other companies develop and manage high quality software applications.
